

D-BOARD®

100% RECYCLABLE MEDIA-BOARD

Eco-friendly throughout the life cycle

D-Board is versatile carton board that can be used for prints, surfaces and constructions in public and private interiors. It contains recycled carton and is itself 100% recyclable.

D-Board is an inverted corrugated board (ICB) made of recycled carton board and manufactured from start to finish in an on-line process. D-Board is straight and flat and can be surfaced with different kinds of carton boards and laminates depending on its intended use.

D-Board can be used for advertising boards, product displays and printed surfaces. Together with DeMill design profiles D-Board is an ideal structural element for displays and exhibition furniture.
