## What is a D-Board?

D-Board is light, rigid, printable, humidity resistance (surface) and fully recyclable with other carton board waste material. The structure of the product is made 100% from recycled carton board. D-Board combines the best characteristics of corrugated board and honeycomb construction.

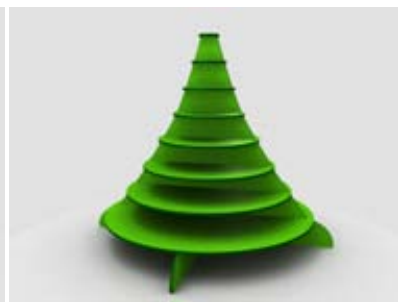

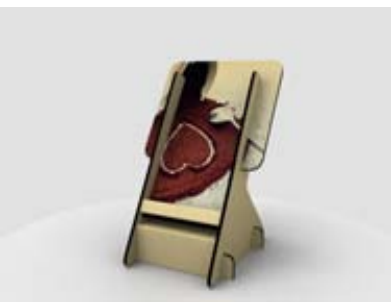

Thanks to its rigidity and super-light weight, D-Board does not warp. It has good heat- and sound insulation properties and can also be produced in a fire-rated quality (B1).

D-Board is available with different surfaces and in different thicknesses and board sizes. Standard board sizes are 1220mm x 3050 and 1600mm x 3050mm and thicknesses are 10, 16, 21 and 30 mm.

## D-Board Light

D-Board Light is thinner and lighter version of D-Board. D-Board light is a strong and rigid media board with standard thicknesses of 5mm and 7mm. It is available in two different qualities: Cream (natural white) with WTL (White Top Liner) and White (bright white) with AFT (Aqua Fine Top).

D-Board light is suitable for UV-printing, printing, taping and for 1D-cutting. This board is an excellent eco-friendly and 100% recyclable alternative for currently widely used display and presentation boards (i.e. Kapa-Board).

## Info:

Platene finnes i 5, 7, 10, 16, 21 og 30 mm.  
Platestørrelse opp til 1600x3050 mm.

## Emballasje:

7 mm.	20 stk. pr. boks, 12 boks pr. pall
10 mm.	15 stk. pr. boks, 12 boks pr. pall
16 mm.	10 stk. pr. boks, 12 boks pr. pall
